## EXPERIENCE

---

### **Unemployed Sabbatical**

*April 2023–present*

Failed at 2 startup attempts. Travelled to 9 new countries. Currently learning the full ML stack from warps to ops.

### **Senior Software Engineer** • LoveToKnowMedia • Barcelona, Spain

*May 2019–April 2023*

Developed cross-product libraries and systems to improve engineering productivity across websites and applications serving 200million+ pageviews/month.

- Enabled product teams to focus on feature development by consolidating 5 discrete ad-tech implementations into a single monetisation stack managing monthly revenue of \$1million+.
- Ensured organisation-wide GDPR compliance by creating shared analytics and consent libraries.
- Accelerated product development by creating a centralised design system.
- Reduced new service development time from weeks to days by introducing IaC via the AWS CDK.

### **Software Engineer** • Freelance • Auckland, New Zealand

*February 2016–May 2019*

Led frontend development of several web applications and sites in partnership with local digital agencies, specialising in building SPAs with React and Vue:

- PrimePanels, creating a new website with interactive collection management.
- YourDrive, a peer-to-peer car rental app (discontinued).
- Quicksense Education dashboard, helping students master I/GCSE mathematics.
- MyBalance, allowing thousands of farmers to interactively optimise soil nutrients.
- movieXchange, streamlining media distribution and ticketing for cinemas worldwide.

### **Software Engineer** • Weirdly • Auckland, New Zealand

*January 2015–January 2016*

Built the Weirdly SaaS application, creating culture-fit quizzes for multinational companies and 100,000+ candidates.

- Administered the Linux server and databases, including a live migration from SQL to MongoDB.
- Scaled from dozens to thousands of users by re-architecting from a single VPS to multiple AWS services.
- Greatly improved developer experience by introducing Docker and CI/CD.
- Improved API performance by modernising a PHP monolith and replacing key endpoints with Node.js microservices.
- Enhanced candidate profiling by integrating AI sentiment analysis (back in 2015!).

### **Web Developer** • Auckland, New Zealand

*2007–2014*

- Created a number of small business e-commerce websites.
- Founded an online farmer's market enabling ~20 local vendors to sell their products online.
- Launched a web hosting company while in high school.

## PROJECTS

---

[784.ai](#) — Browser-based MNIST neural network demo using TypeScript + Svelte and trained in Rust.

[numble.cc](#) — Wordle-inspired number game for ~500 daily players.

## QUALIFICATIONS

---

### **Bachelor of Engineering (Mechanical)**

*Graduated 2016*

The University of Auckland
